Education

B.Tech in Computer Science *Pandit Deendayal Energy University*

Gandhinagar, India 2021–2025

Relevant Courses: Software Engineering, Data Structures. (CGPA: 8.91/10)

Skills

- **Programming Languages:** Go, Java, Python, C++, JavaScript
- **Backend & APIs:** Spring Boot, Spring Data JPA, Node.js, Express.js, FastAPI, Microservices, Clean Architecture
- **Databases:** SQL, NoSQL, MongoDB, Elasticsearch, Redis
- **DevOps & Others:** AWS S3, AWS SQS, Docker, Data Structures and Algorithms (DSA), Git, Kubernetes, Kafka

Professional Experience

Software Developer, (HyperNorm AI)

Bangalore, Aug 2025 – Nov 2025

- Architected Go-based microservices applying Clean Architecture and CQRS principles, reducing inter-service dependencies by 25% and enabling independent deployability across service boundaries.
- Designed AWS SQS-driven async processing pipelines with retry logic and dead-letter queue handling, increasing API responsiveness by 33% and achieving fault-tolerant background execution for high-volume operations.
- Built concurrent worker pool mechanisms for I/O-bound tasks, improving throughput and reducing processing latency under sustained high-load conditions.
- Integrated Elasticsearch for centralized structured logging and advanced querying, cutting average issue resolution time by 36% and providing real-time system observability across services.

Software Developer (Intern → Full-Time), (Intech Creative Services)

Gandhinagar, Dec 2024 – July 2025

- Promoted from intern to full-time within 4 months based on consistent delivery across backend, security, and database initiatives.
- Refactored legacy Spring Boot and Hibernate modules, improving code readability and reducing production bugs by 19% through structured exception handling and standardized error responses.
- Built and maintained RESTful APIs using Java, Spring Boot, Spring Data JPA, and MySQL following layered architecture, ensuring clean separation of concerns across controller, service, and repository layers.
- Secured sensitive endpoints using Spring Security with JWT-based authentication and role-based access control, eliminating unauthorized access vectors across all API routes.
- Optimized SQL queries and indexing strategies, reducing average API response time by 27% under concurrent load, and implemented JPA-based transactional workflows with rollback handling to maintain database integrity during complex API operations.

Projects

Digital Queue Management System:

- Engineered a full-stack queue management system using Spring Boot, React.js, and MySQL with JWT authentication, leveraging event-driven architecture and Server-Sent Events (SSE) for real-time notifications and concurrent request handling.
- Implemented low-latency, event-driven user notifications via SSE (eliminating polling) and strengthened backend security with JWT-based authentication, role-based access control, and JPA/Hibernate for reliable performance under concurrent access.

Job Seeking Portal:

- Built a scalable job-seeking platform using the MERN stack, implementing MongoDB schema design, RESTful API development with Node.js and Express.js, and a React.js-based dynamic frontend for seamless job application workflows.
- Job seekers create profiles and apply for jobs, while employers post jobs and manage applications for efficient hiring.

Achievements

• **Hack-avengers (1st Runner-Up):** *(Certificate)*

- Delivered a React.js, Python, and Node.js solution reducing load time by 40%, cutting cloud costs by 20–30%, and enhancing security with forensic reporting.
